

SLIconnect: Group Formation Technology Guidelines

SLIconnect resources can be shared in a group setting: staff professional development, priest support groups, leadership team training and retreats.

Room Setup

Desktop Computer or Laptop

- Fast, reliable Internet connection. If your wireless network drops connection often, consider connecting to the Internet via Ethernet cable.

Visual

- Use a projector to display the video onto a LCD, plasma or LED screen.

Audio

- Connect speakers or PA system to your computer to allow ample sound.
- To ensure adequate sound for all participants, consider connecting external speakers to your computer. Check your computer to see if a special adapter is needed to connect the speakers.

Participation for Live Webinars

- If you are sharing a live webinar with your group, designate a facilitator to sit at the computer and type in questions using the chat feature on GoToWebinar.

Troubleshooting

Internet Disconnected

- If the video won't load, it could be an Internet bandwidth issue. Close any other web pages that are open, including file sharing and music and video streaming.
- Try disconnecting and reconnecting to the Internet, or switching from a wireless to an Ethernet connection.

Audio or Visual Issues

- Make sure your computer speakers are on and the volume is turned up.
- If the sound or video is going in or out, try disconnecting and then reconnecting to the Internet.
- Log out of SLIconnect.org, close your Internet browser, then restart your browser and log in again.
